RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 edition. Excerpt: . . . B), which gives C. We advise the student to make a special study of this case, and to master the method of solution by employing a subsidiary angle. iv. a, b, A given, to find C, , B.  $\sin B$ , which gives B.  $a \cos(A - B)$ , which gives C  $\cos A$ . which gives e.  $\sin A$  v. a, b, given, to find A, , C. There are many formulas suitable for finding the functions of the angles when the sides are given; for example,  $\sin A = \frac{a}{c} \sin C$  (s-b) (s-), which gives A. B and C may be found by the same formula, or by the method of Case Hi. When all the sides are given, we may also find the angles by dividing the given triangle into two by a perpendicular from the vertex on the base, thus: Let ABC be the triangle, BD a perpendicular from B on AC. Then  $BD^2 = AB^2 - AD^2 = BC^2 - CD^2$ .  $TM. \cdot c - x$  or  $CDr$ ----- .  $2C \cdot 2C$  We have now all the necessary data for solving the two right-angled triangles ABD and BDC, for two sides are given, thus:  $\sin B = \frac{b}{c} \sin C$ . When two sides and an included angle are given, it is best to work out the other angles by the formulae  $\tan(B - C) = \frac{b - c}{b + c} \tan \frac{B + C}{2}$  In this way we get B - C and B + C, from which and C may be found. Certain interesting identities may be proved from the formulae for oblique triangles, and whenever an identity is required...
